

In the claims:

1. A fishing device, comprising a substantially rigid lower member; a lee attached to said lower member; a net having a lower end attached to said lower member and an upper end vertically spaced from said lower member, said net being slidable over said lee so that when fish hits said net said net slides over said lee and forms a bag in which fish is caught; and float means for holding said net in a substantially vertical position, said float means including two float attached to said net at said upper end and spaced from one another horizontally.

2. (Original) A fishing device as defined in claim 1, wherein said lee includes two lee members connected to opposite ends of said lower member and both connected to a main lee.

3. (Currently amended) A fishing device as defined in claim 2, wherein said two lee members and said lower member form substantially a triangle in which said net is arranged before being hit by fish.

Claim 4 cancelled.

5. (Currently amended) A fishing device as defined in claim 2; and further comprising a bait extending from said main lee downwardly towards said nut.

6. (New) A fishing device as defined in claim 2; and further comprising a connecting lee which extends substantially horizontally at said upper end of said net and has two horizontally spaced points, said two floats being attached to said net in said horizontally spaced points of said connecting lee.

7. (New) A fishing device as defined in claim 6, wherein said connecting lee in said horizontally spaced points is provided with loops through which said two lee members pass.

8. (New) A fishing device, comprising a net; a substantially rigid lower member having two opposite ends connected with said net in two lower points of said net; two side lee members having two lower points also connected to said opposite ends of said lower member and extending upwardly so that said net above said lower member is slidable over said lees; and a main lee connected to said two side lees from above, so that when fish hits said net, said net slides over said two side lees above said lower member and forms a bag below said lower member in which bag fish is caught.
